12/10/2025 18:00:	Harsh Kumar	Data Science	Mayur Sir	12/9/2025	One to One feedback Instructor :-Mayur sir . He was chill just asked few questions around my experience , what roles i am applying ,then questions on project like open any project and explain the code what have you done it was my ml project so I explained the notebook . I asked him about feedback then he gave me some advice ,that's all he asked in 30 min.Overall prepare your resume well and provide link of projects in resume	Prepare your resume and know your code ,whatever you have done in that project as he may ask you to explain the code of the project in your resume .

12/10/2025 21:05:	Gyan Prakash Kushwaha	Data Science	Anirudhha	12/10/2025	Machine Learning Fundamentals & Evaluation - In a classification problem, what evaluation metrics do we use to quantify how good the model is? - Why can we not use accuracy for imbalanced datasets? - Can you explain in simple terms why accuracy fails when predicting the minority class? Algorithms (Ensemble & Regression) - What is a Boosting model? Explain the general boosting process (e.g., weak learners, sequential training). - In Scikit-learn implementations (like Random Forest or AdaBoost), what are some key hyperparameters? How does hyperparameter tuning help? - What is the difference between Model Parameters and Hyperparameters? Can you give examples of each? - Briefly explain the end-to-end flow of how the Linear Regression algorithm works (from data input to Gradient Descent and weight updates). Natural Language Processing (NLP) - If given raw text data, what are the typical steps for cleaning and feature engineering before model training? - What is Stemming and why is it used? - What is the difference between the output of Stemming vs. Lemmatization? (e.g., for the word "racing"). Generative AI & LLMs - Briefly explain what RAG (Retrieval-Augmented Generation) is. - What are the differences between these four approaches? Discuss the advantages/disadvantages (resource cost, hallucination, etc.) of each: 1. Training from Scratch 2. Fine-tuning 3. RAG 4. Prompt Engineering - How does the Fine-tuning process work specifically (e.g., freezing layers)? - How do you process a document to use it as context? (Chunking, Embeddings, Vector Stores). - In a RAG system, how do you determine which part of the context is relevant to the user's query? (Embeddings, Cosine Similarity). Time Series Forecasting - What specific libraries have you used for time series data (e.g., Prophet)? - What does Stationarity mean in the context of time series? - Can you explain the concepts of Trend, Seasonality, and Cyclicity? Deployment - Apart from Streamlit, do you have experience with other deployment technologies or cloud platforms (like AWS)?	Prepare your best, And Bhagwan pe bharosa rakho

Timestamp	Your name (optional)	Your Domain	Instructor Name	When was your 1o1	What was asked?(in detail)	Tips for other students?
12/11/2025 21:39:	Agent X	Programming	Sathyanarayana	12/11/2025	- Asked about my projects and work experience. - Basics of Python, SQL, and JavaScript. - Difference between lists vs arrays. - Python coding question (simple code using lists). - SQL query to get all employees whose names start with "S". - Questions on async/await in Angular. - Asked about coding tasks from my GitHub projects; interviewer might check other repositories too. - Asked to write code on a notepad because my AI autocompletion was on fire ;) - Asked to create an API endpoint for handling a GET request. - Questions on time complexity and ordering of complexities. - I struggled with some DSA questions. - Feedback: Improve DSA as soon as possible.	Prepare dsa, sql and python coding very well.
12/11/2025 22:24:	Varun	Programming	Sathyanarayana	12/11/2025	- First i was asked about a small Intro on myself. - Then he started with the tech stack i mentioned which i knew. - Started with Python asked me list vs dict - Then asked me to write code to see frequency of characters in a string. - Then asked me to name lowest to highest value of Big O notation values (O(1),O(n)...etc) - Then Asked me 1 question related to data structures - Then he asked me about flask, asked me to write a flask route - Opened my github and picked a random repo and asked me to explain few lines (he gave the line numbers) and questioned me on it	He is a very chill sir . Just prepare with whatever you have put in your resume with every tech stack and be ready with your projects as well.
12/12/2025 20:20:		Data Science	MAYUR	12/12/2025	1. WHAT IS SVM AND WHAT IS HARD MARGIN AND SOFT MARGIN AND WHAT IS SUPPORT VECTOR FOR SVM. 2. WHAT IS LINEAR REGRESSION WHY USE MSE FOR IT AND WHAT IS SGD ROLE IN IT AND RIDGE REGRESSION. 3. TYPES OF IMPUTATION AND ENCODING. 4. PROJECT RELATED TO U R DOMAIN AND 1 TO 2 QUESTIONS.	GO THROUGH THE SUBJECTS DONE AND RESUME BASED PROJECT REGARDING YOUR DOMAIN.
12/12/2025 20:44:	Heyden	Programming	Arup Sir	12/12/2025	- your introduction - asked about implementation of my projects - In depth questions about SQLAlchemy, deployment, Vue.js, JavaScript Django/Flask difference - What is ORM, MVC, optimization techniques - no questions from DSA - no coding round - went for 30 mins	Know in depth implementation of your projects along with its deployment part, and theoretical as well, all concepts.

Timestamp	Your name (optional)	Your Domain	Instructor Name	When was your 1o1	What was asked?(in detail)	Tips for other students?
12/26/2025 11:38:	Tanush	Data Science	Jimmi	12/26/2025	--- DS Internship 1o1 --- Resume projects: 1. Asked about how my projects in resume work end to end. I had IoT 2. Then some questions about scalability of projects. 3. Asked me about what problems i faced in hardware part of projects 4. How i chose to do electronic based project. 5. Questions regarding evaluation metrics and their impact Theoretical: 1. Where would you use regression/classification/recommendation ty 2. working of PCA 3. statistical analysis before training models 4. bagging boosting 5. which models would you train before ensemble models and why	Be prepared conceptually with regards to your projects in resume. He also asked about PCA, to test whether i forgot the old concepts since i am now in degree level. At the end, he gave me tips about not sounding monotonic while answering which could be harmful during actual interview.
12/27/2025 11:40:	Tushar	Programming	Atul sir	12/27/2025	Difference between having and where in DBMS Difference in delete, truncate Coding question, sort an array without any built in functions. Question related to DP Asked about my project/ experience. Time complexity in depth questions.	Prepare your DSA and DBMS very well
12/27/2025 12:58:	Sam	Programming	Atul	12/27/2025	1. Introduction 2. Asked about work experience and what I studying now 3. Seen all the project which I have mentioned in the resume 4. Ask me to explain the code with line number he given 5. Asked to name of five shorting algorithm 6. Tell me to do a shorting on unsorted list using any python compiler 7. Asked me difference between Where and Having 8. How to find second highest salary form a table 9. some more dsa questions went around 45 min for.	Prepare DSA, SQL and must know about the core concepts
12/29/2025 12:02:	Sonal	Programming	Atul sir	12/27/2025	Introduce yourself Go through ur resume Explain your projects Describe your internship experience Run one of your projects Explain ACID properties Cross join and inner join difference What is DBMS? Write an code for the given problem What is time complexity? What is space complexity? What is dynamic programming?	Basically, prepare the DSA part and DBMS part properly and explain all your projects. Overall, he is chill and no need to stress. Keep confidence in yourself.

Timestamp	Your name (optional)	Your Domain	Instructor Name	When was your 1o1	What was asked?(in detail)	Tips for other students?
1/24/2026 17:20:1	Sam	Programming	S SATYANARAYA	1/24/2026	1. Introduction 2. Different between list and dictionary follow up -- how dictionary provides fast lookup 3. Promises in JS follow up -- Write a simple Asynchronous JavaScript function 4. Best to worst time complexity 5. In a linked list how to delete the last node (logic) 6. which sorting algo is best and why 7. Create an api to add data into a dictionary 8. code explanation from github Suggestions --> Practice coding questions because it will help you to	Clear all the basics of python, JS, SQL and DSA (logic)
1/24/2026 17:56:2	Anant	Programming	Arup	1/24/2026	- your introduction - tell about projects which you've made. - Asked about - redis, http & https difference. - if i've used any hosting platform. - difference between client server & web server - difference between == and === - difference between where and having. - 3 main reasons why we use ORM over hardcode sql queries. - i showed my project which was hosted. - no dsa - no coding questions.	If you have 1o1 with arup sir - make sure to know about deployment, and conceptual things like i mentioned above. - which were all related to my resume.

1/27/2026 12:21:2	-	Data Science	Aniruddha	1/27/2026	Interview Experience – What Was Asked (In Detail) Interviewer Overview Anirudh is a very nice, sweet, genuine, and professional interviewer. He gives you time to think, does not rush answers, and helps you correct. He focuses on: - Conceptual clarity - Flow of explanation - Real-world understanding rather than rote formulas 1. Machine Learning Fundamentals & Evaluation He asked questions like: In a classification problem, what evaluation metrics are used to judge why accuracy is not suitable for imbalanced datasets? Explain in simple terms why accuracy fails for the minority class. Error metrics for regression: - MSE - RMSE R^2 score He prefers intuitive explanations with examples rather than formulas. 2. Feature Selection & Feature Engineering Topics discussed Feature selection techniques: - Filter methods (correlation, heatmaps) - Wrapper methods - Embedded methods Feature engineering techniques: - Column transformations - Handling numerical and categorical features PCA: - Why it is used - Dimensionality reduction - Trade-off between explainability and variance He may ask you to optimize your explanation style, for example: "Don't explain formulas—explain with examples and numbers." 3. Linear Regression (Very Important) He covered the complete flow: - End-to-end working of Linear Regression - Cost function intuition - How Gradient Descent works - Optimization methods - Regularization: - Ridge (L2) - Lasso (L1) - Multicollinearity - Column transformation methods If your explanation flow is weak, he guides you back politely. 4. Ensemble Models & Algorithms Questions included: - What is a Boosting model? - General boosting process: - Weak learners - Sequential training - Difference between: - Model parameters - Hyperparameters - Hyperparameters in: - Random Forest - AdaBoost	Tips for Other Student (Very Important) Before the Interview - Open your resume projects beforehand - Be ready for screen sharing - Keep project dashboards, charts, and reports ready - Revise: - Feature selection - Linear regression - Evaluation metrics - RAG basics During the Interview - Start with a clear introduction - If discussing: - Columns → keep dataset open - Accuracy/results → keep metrics visible - When showing charts: - Explain insights - Explain decisions derived - Explain how those decisions help in real-world scenarios - Communication Style - Explain with: - Examples
