General Guidelines:

(i) This paper comprises two types of questions: Short Answer Type and Multiple Choice Questions. The total marks for the paper are 30. Answer all questions to the best of your ability.

(ii) Short Answer Type Questions:

- These questions are numbered **3 to 7**. Each question includes a specified word limit and mark allocation.
- Ensure that your answers are well-supported with relevant content from the course and suitable examples where applicable. Answers based purely on guesswork or personal opinions without support from theories or frameworks will not earn any marks.
- Irrelevant answers, off-topic responses, or duplication of information from the question paper will not receive marks.

(iii) Multiple Choice Questions:

- These questions are numbered **8 to 23** and carry one mark each.
- Carefully read each question and select the most accurate option. There is only one correct answer per question.

(iv) All characters, relationships, and events in the case or questions are fictitious. Any resemblance to real-life persons or events is purely coincidental.

(v) Any content in this paper that is owned by authors, publishers, or copyright holders will be appropriately redacted to avoid copyright infringement.

A team is developing a new smart sensor module that involves hardware design, embedded firmware development, PCB integration, and system testing. Two managers adopt different working styles:

1. Shreya, the project manager, ensures the team aligns on technical requirements during the initial design meetings. She then divides responsibilities, such as circuit design, firmware programming, and testing, assigns clear deliverables and timelines, and expects team members to work independently on their tasks. Progress is tracked through structured weekly updates to ensure components integrate correctly.

2. Pratham, another manager, engages hardware engineers, firmware developers, and system testers in an ongoing iterative process. The team frequently discusses design ideas together, jointly debugs issues such as signal noise or firmware compatibility, and collaboratively refines solutions to improve overall system performance.

With respect to 10 Cs of Teamwork discussed in the course, what best describes the difference between the two approaches?

Options :

6406536642682. ✓ The first approach emphasizes coordination, while the second emphasizes collaboration

6406536642683. ✗ The first approach emphasizes collaboration, while the second emphasizes coordination

6406536642684. ✗ Both approaches demonstrate pure collaboration

6406536642685. ✗ Both approaches represent only coordination
